Synthetic Server Operations - Spring Boot Service Start

A second application service on the same server was started during the recorded maintenance interval; this is independent evidence from the catalog-api lifecycle on mesh-82.

Server	Role	Address	Service	Operation	State
mesh-82	mesh worker	192.0.2.82	springboot-web	start	active

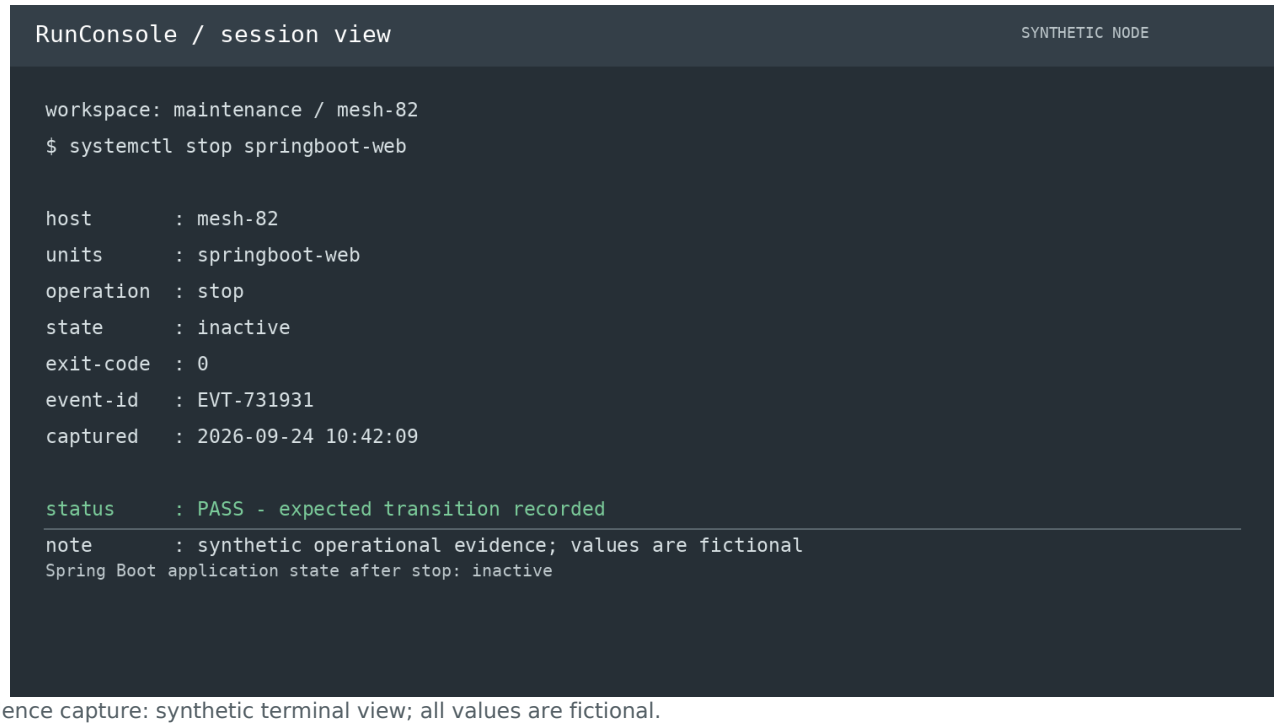

Evidence capture: synthetic terminal view; all values are fictional.

The process state following the start operation is active.

Synthetic Server Operations - Spring Boot Service Stop

The same server is later shown with the Spring Boot application stopped; the lifecycle evidence is independent of the earlier catalog-api record.

Server	Role	Address	Service	Operation	State
mesh-82	mesh worker	192.0.2.82	springboot-web	stop	inactive

Evidence capture: synthetic terminal view; all values are fictional.

The process state following the stop operation is inactive.
